Summary

Full-Stack Developer with hands-on experience building and maintaining production applications using React, React Native, Node.js, Express, MongoDB, Laravel, Vue.js, PostgreSQL, and AWS. Experienced in developing applications from scratch, working across existing codebases, integrating third-party services, implementing security improvements, automated testing, and managing production deployments. Stronger on the frontend, with the ability to own features end-to-end across the frontend, backend, database, and infrastructure.

Work Experience

Rise Up Kids

FULL STACK DEVELOPER

(Remote)

Dec 2025 – Present

- Develop and maintain a live learning platform using **React/Vite, Node.js/Express, MongoDB, and React Native/Expo** across web and mobile applications.
- Build and maintain REST APIs, authentication flows, database models, business logic, and responsive user interfaces across the platform.
- Developed and maintained payment integrations with **Stripe, PayPal, and PagBank/PagSeguro**, including webhook processing and security hardening.
- Built and prepared the **React Native/Expo mobile application** for both **iOS and Android**, including EAS builds and App Store / Google Play submission requirements.
- Implemented security remediation covering authentication, authorization, privilege escalation, path traversal, secret management, webhook verification, data privacy, and sensitive-data logging.
- Reworked structured application logging using **Pino**, including PII and secret redaction across approximately 440 logging call sites.
- Implemented automated testing using **Jest and Vitest**, maintaining regression coverage across **800+ existing tests** while applying security and feature changes.
- Implemented child-data privacy and consent improvements aligned with **COPPA/LGPD requirements**, including data deletion workflows.
- Improved payment webhook security and reliability across multiple payment providers by addressing signature verification, idempotency, and authorization issues.
- Handled production deployment and infrastructure tasks involving **Linux, Nginx, PM2, AWS S3, CloudFront, and server configuration**.
- Prepared production releases and platform-specific requirements for Apple and Google app distribution, including privacy disclosures, accessibility declarations, feature gating, and store assets.
- Work across the complete product lifecycle, from frontend implementation and API development to testing, security, deployment, and post-release troubleshooting.

- Delivered API creation, integration, and maintained for a **MERN** system, ensuring consistent performance and stability.
- Migrated backend logic from Heroku to AWS EC2, improving deployment reliability and reducing overall downtime.
- Implemented dashboard analytics with advanced filtering and processing of deeply structured data.
- Managed backend and frontend deployments through AWS EC2 and AWS Amplify.
- Built statistical reporting features with downloadable PDF and Excel exports for a childcare management platform.
- Designed and developed an end-to-end mental health triage platform from the ground up, including full system diagrams, data models, backend and frontend architecture, and complete functionality.
- Built a secure role-based access system for three user types with optimized data flows.
- Developed the landing page, core triage features, diagnosis module, admin controls, and organization-level management with scalable structure ready for payment integration.

ROK (Revolution of Kitten Inc.)**SOFTWARE ENGINEER INTERN****Ormoc & Cebu (Remote + Onsite)**

Feb 2025 – June 2025

- Contributed to three major projects (Azusa, Architwin Basic, Architwin Lib) focused on 3D visualization, feature development, and system optimization using **Vue.js**, **Typescript**, **Web2py (DAL)**, **Matterport SDK**, and **Three.js**
- Developed and enhanced frontend features in **Vue.js**, improving responsiveness and UX across devices.
- Debugged and optimized **Matterport SDK** and **Three.js** integrations, resolving transform control and object rendering issues for smoother 3D interactions.
- Improved loading performance by optimizing object handling and implementing efficient caching strategies.
- Enhanced mobile responsiveness, dynamic tag behavior, and panel movement for *Architwin Lib*.
- Collaborated within an **Agile workflow** using GitLab (version control) and Redmine (sprint planning).

Projects

Crime Guard System*Laravel 10, Vue 3 (Options API), Tailwind CSS, Google Maps API, MySQL*

- **Problem:** Reporting and analyzing crimes in Ormoc was inefficient, relying on manual processes.
- **Solution:** Built a real-time SPA with automated reporting, crime heatmaps, predictive analytics, and incident tracking. Used MVC + DTO patterns for scalable design and Google Maps for location.
- **Impact:** Awarded Capstone Project of the Year 2025. Deployed on cPanel and adopted in academic competitions as a benchmark project. Reduced crime-reporting process time from minutes to a single click.
- <https://github.com/Je-Joestar24/CrimeGuard>

AskJejo*Laravel 12, Vue 3 (Composition API), Docker, PostgreSQL, Groq API*

- **Problem:** Students and professionals needed a fast, centralized platform for Q&A and learning.
- **Solution:** Developed a full-stack chat and knowledge-sharing app with Laravel Sanctum authentication and SPA frontend. Dockerized for portability, integrated Groq API with LLaMA models for AI-powered Q&A, and Markdown support for clean formatting.
- **Impact:** Delivered a modular, production-ready platform. Showcased how AI integration enhances learning platforms in real-world use cases.
- <https://github.com/Je-Joestar24/askjejo>

Technical Skills

Strongest Areas: Problem-Solving, Modular Development, System Design, API Integrations

Core Stack: Laravel (REST APIs, Eloquent ORM, Queues, Middleware, Authentication, Scalability) | Vue.js (Composition API, Pinia, Vue Router, SPA Architecture) | MERN Stack (MongoDB, Express.js, React, Node.js)

Programming: PHP, JavaScript (ES6+), Typescript, Python, Java, SQL

Frontend: Tailwind CSS, Oruga-UI, Responsive Design (Flexbox, Grid), Web Animations

Backend & Architecture: MVC, DTO, Modular Development, Clean Architecture, System Design, Headless Architecture

Databases: MongoDB, Mongoose, PostgreSQL, MySQL, MariaDB, SQL, Database Design, Query Optimization

Cloud & DevOps: AWS EC2, AWS S3, CloudFront, AWS Amplify, Linux, Nginx, PM2, Docker, Server Configuration, Deployment

Testing & Security: Jest, Vitest, Cypress, API Testing, Security Auditing, Authentication Security, Authorization, Webhook Security, PII/Secret Redaction

APIs & SDKs: Stripe, PayPal, PagBank/PagSeguro, Google Maps API, Groq API, Matterport SDK, Three.js, Spoonacular API

Education

Western Leyte College of Ormoc – Ormoc City, Philippines

BACHELOR OF SCIENCE IN COMPUTER SCIENCE

Graduated: July 11, 2025 | **Magna Cum Laude**

Awards & Honors

- Programmer of the Year – 2025
- Capstone Project of the Year – 2025
- Top 5% Programmer Nationwide – CodeChum Academy
- Excellence in Programming – July 2023
- EVCO Champion – Oct 2024 | 3rd Place – Oct 2023
- National IT Competitor (iSite & CodeChum) – Java & Python Tracks (2023–2025)
